-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4, 5, 8, 9, and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Wrench JR., US 2002/0104025.

As per claims 1, 5, and 9 Wrench JR. teaches a system for establishing secure connection between a client and a server, [0017]. Wrench JR. teaches storing keyfiles comprised of private keys and certificates, [0004]. Wrench JR. teaches accessing the stored keyfiles via a password, [0028]. Wrench JR. teaches transmitting from client to server a digital certificate to perform authentication, [0004]. Wrench JR. teaches utilizing SSL, [0004]. As per claims 4, 8, and 12, Wrench JR. teaches utilizing a GUI for interacting with the system, [0027].

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2134

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 6, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Wrench JR. US 2002/0104025 in view of Sasaki US 6,378,071.

As per claims 2, 6, and 10 Wrench JR. teaches using a password to access stored data, but failed to teach a unique identifier.

Sasaki teaches accessing securely stored information with both a unique identifier and a password, (Col 5 lines 38-46).

It would have been obvious for one of ordinary skill in the art to use the unique identifier of Sasaki with the password of Wrench JR. because the addition of the identifier increases security.

Claims 3, 7, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Wrench JR. US 2002/0104025 in view of Norris US 2002/0095568.

As per claims 3, 7, and 11, Wrench JR. teaches authentication but fails to teach digital signatures.

Norris teaches the use of digital signatures (hashing) with physical tokens, to perform an adapted method of SSL authentication, [0091].

It would have been obvious to one skilled in the art to use the authentication method of Norris with the system of Wrench JR. because the physical token adds an extra layer of security.
